Brake Caliper HI 180 HUK

hydraulically activated – non-releasing as yaw brake in wind turbines

Technical Data

The braking torques shown in the diagram are based on a theoretical friction coefficient of 0,4.

Oil pressure:	min. 15 bar max. 160 bar
Oil volume:	max. 190 cm ³
Weight:	ca. 65 kg

Other features

- High safety against leakage
- Painted with surface coating class C4-L according to ISO 12944
- For brake disc thickness W = 30 mm; larger brake disc thicknesses can be achieved with the use of a spacer installed by the customer

Features	Code	ļ
Brake Caliper	Н	
With inside-mounted brake pads	I	
Frame size 180	180	
Hydraulically activated	Н	
Non-releasing	U	
No adjustment to accommodate friction block wear	K	
Max. clamping force 200 kN	200	

Example for ordering

Brake Caliper HI 180 HUK, max. clamping force 200 kN:

HI 180 HUK - 200

Accessories

 Optional painting with surface coating class C4-H or C5M-H (offshore) according to ISO 12944

RINGSPANN[®]

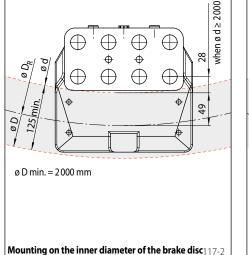

Brake Caliper HI 180 HUK

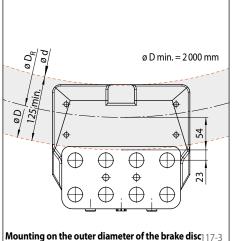

RINGSPANN®

hydraulically activated – non-releasing as yaw brake in wind turbines

Mounting

Mounting on the inner diameter of the brake disc:

 $D_{R} = d + (2 \cdot 49 \text{ mm})$

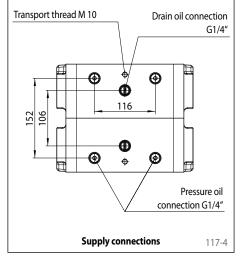

(when $d \ge 2000 \text{ mm}$)

Mounting on the outer diameter of the brake disc:

 $D_{R} = D - (2 \cdot 54 \text{ mm})$

Calculation of the braking torque

$$M_{\rm B} = \frac{D_{\rm R}}{0,786} \cdot p \cdot \mu$$

Formula symbols

- M_B = Braking torque [Nm]
- D = Outer diameter brake disc [mm]
- d = Inner diameter brake disc [mm]
- D_R = Friction diameter [mm]
- p = Oil pressure [bar]
- μ = Friction coefficient
